ANNOUNCEMENTS

(Not over 50 words, with a continuous charge of 25 cents per week thereafter.)

A PLEASANT PLACE

To spend a pleasant hour. Best the crowds, best the music, best refreshments. Latest Dry Goods novelty at the Gem from Los Angeles. Drop in and make yourself at home. Otto Gashwend, Ford Hall.

THE EVANGELICAL CHURCH

Cor. Rinaldo and Vesper Sts.

Sunday School at 10 A. M.

Morning service at 10:45 A. M.

Subject of sermon "Time on the Way to Jerusalem to suffer and die for our Sins."

Lenten service in the evening at 7:30 P. M. Subject "Jesus Christ and the High Priest Caiaphas."

This church believes in the inspiration of the Bible, the virgin birth of Christ His virgin birth, His miracle, the sacrificial atonement, salvation by grace through faith only, and all the other essentials of Christianity. We are conservative and strongly believe in our public gospel as discussed from our pulpit.

M. H. TITTEN, Pastor.
239 Lendale Street.

BUYERS—WAITING

If you want to sell your small acreage, or your home, we have buyers waiting for sale, also property. Hugo A. Carlson.

Painting and interior decorating. Let me figure on your painting. Geo. Grindle, 6820 Vineland Avenue, off Lankershim.

Chicken Dinner Service will be held next Sunday morning at 11:00 A. M. at the home of Otto Gashwend, corner of Jordan Avenue and Wyandotte street.

Notice — Public Service of the Antelope Valley Press of Owensmouth will be held at the residence of P. C. Scott, 7525 Remington Avenue, with the Rev. Anthony H. Dexter in charge, next Sunday morning at 10:45 a. m. The order of evening prayer will be read with hymns.

BABY LIMA BEANS

We have some good lots of seed beans for sale. Call now and make selection. Lankershim Seed Store, Van Nuys-Owensmouth Boxe Grove. W. Owensmouth, Cal. W. E. ALKIRE, Manager. Phone 123-J2.

WANTED—Ford Touring CAR PURCHASE. For information call or write FRANK PRICE, 7315 S. ALAMEDA AND WELLS DRIVE, 3-4 MILE, S. W. OF TARZANA.

WANTED—Salesman to sell Automobiles on Owensmouth. Big Commission. No selling experience necessary. Box 367 Van Nuys Cal.

WE REDEEM COUPONS ON ANY STUDIO AND SAVE YOU MONEY. CLARK'S STUDIO, VAN NUYS.

The Holly Hatchery have just secured the agency for the Molley pure breeder stover, which is a very fine variety of chicks gas is available, cuts down fuel cost.

FOUND—White Mare and Bay Horse. Inquire Jose Valarde, Ford Owensmouth Avenue.

NOTICE TO REAL ESTATE DEALERS—Lots are located in Fred Poore Canyon is off the market. Lloyd W. Fuller, Box 1, Van Nuys.

INSANE WOMAN FOUND HERE

Officer Dale found Marguerite Cassidy, who was adjudged insane by the County Hospital, on Saturday in the Mexican quarter of town. She was turning on a hose pipe on all machines which passed the Fresno store. The officer experienced much difficulty in keeping the woman quiet and had to handcuff her to keep her from biting him. She took her back to the hospital where she had spent nine months before.

BRIEF PERSONAL NOTES

Mr. and Mrs. M. Cervantes, spent Sunday with relatives in Orange.

Dorr Carpenter of Dr. Cook has arrived yet?

Maurice Berketeed's baby has been quite ill lately with swollen glands.

W. B. Hydon returned from Long Beach Saturday morning.

Several from here attended the races at Beverly Hills last Sunday.

Mr. and Mrs. A. H. Hoefer are having a small dinner party this evening.

Billie Thorp is out of school this week getting the chicken "pox."

The Walker children are confined to their home with chicken pox.

Mr. Montgomery Bair is assisting Mr. Snyder in the Leader store.

Mr. and Mrs. Frank Elema and family were over from Oxnard Sunday visiting old friends and neighbors.

Mrs. J. L. Waring and Mrs. Martha Waring returned last Thursday from Mesa, Arizona.

Dance to good music on a good floor every Saturday evening. Owensmouth Cafe.

Bobbie Franklin, baby boy of Mr. and Mrs. Jess Franklin has an attack of measles.

August Schold, salesman has resigned from the Valley Mercantile today, March 1.

G. A. House drove out from Los Angeles on Tuesday to see his new home on Owensmouth Avenue.

The De Luxe Cafe is now using one half lbs of meat per week. They do all the cooking for Grand each day.

Mr. Hydon and Mr. Berketeed are visiting as they left their sign at the store opening all night.

H. A. Holcomb has just purchased a new Ford touring car and Fordson tractor from Mile C. Walker.

Mr. and Mrs. Guy M. Cary have moved into their new home and are enjoying the nightly concerts.

Mr. and Mrs. George Walton are visiting with Wm. Blumle and family.

A welcome improvement is noted in the appearance of Sherman Way thru Reseda.

Fred Hanzinger and family are moving to the Mulvey ranch on Lankershim, east of the Pepsin ranch.

Mrs. Hull and her daughter Helen visited at Byrem Hydon's over the week end.

Mrs. Walters entertained her sister Miss Shaw of Los Angeles one day this week.

Miss Helen Hoagland returned home Sunday after a weeks visit with Mr. and Mrs. Trevor and family.

Fay Thomas spent the week end with his parents at Chatsworth. Fay is attending U. S. C.

The Gilbert Bros. of Monrovia were up Saturday looking after their ranch here on Owensmouth avenue. They are considering sub-division.

Mr. and Mrs. Leonard M. Martin and Miss Eleanor Martin of Los Angeles were guests at the home of the writer ranch.

The California Jubilee Quartet are guaranteed grouch removers. March 16th. Auspices and benefit of the High School.

Mr. and Mrs. Jess Franklin were visitors at El Monte last week to attend the funeral of Mr. Franklin's mother.

A little daughter was born Monday to Mrs. Luther of Santa Ana, at the home of her mother, Mrs. Hallina B. Hadley of W. Sherman Way.

George Thomas has added to the apparatus in his gymnasium by suspending the Carlisle trees on both sides of his ranch.

Mr. and Mrs. W. J. Mathews and Frank and Mr. and Mrs. W. B. Hydon motored to Long Beach and visited Monica Thursday.

The dances of the W. C. C. C. are getting very popular, even Hollywood people seem to motor out and dance. They say "we will come again."

Miss Elna Carlson spent Tuesday with her mother, Mrs. Hugo Carlson, who is spending the week in Los Angeles.

The yellow "poppy fields" north of Owensmouth attracted many people last week and they were in bloom in profusion. The poppies soon disappeared.

Mr. and Mrs. J. W. Martin and Mr. Martin of Corcoran and Miss Kathleen Martin of Monrovia were guests last week of Mr. and Mrs. O. W. Pyeatt.

Our High School boys have proved themselves regular He-men at basket ball having won the valley championship Saturday night and year in succession. Rah! Rah! Rah!

Owensmouth will meet China in the Semi-final of the basket ball league on Friday night at the Van Nuys High School at 8:00 o'clock. Get your school children there.

Mr. and Mrs. Ed Hoagland, Mr. and Mrs. Ed Hoagland, Mr. and Mrs. Ed Hoagland,

RNIA NEWS ITEMS IN BRIEF

Paragraphs of Interest to Readers of Golden State.

The Bank of Italy is to erect a 14-story building at Stockton.

San Rafael will vote on a $500,000 bond issue for new schools.

Mr. Vanderveit, an American sportsman and his wife, recently arrived in Milan, Italy, on their trip around the world in a motorcar. Mr. Vanderveit is making the trip on a wager.

SAVE AUTO FROM WINTER TROUBLE

Care of Finish, Engine and Battery Among Most Important Items in Cold Weather.

HOT WATER QUITE INJURIOUS

Heat Is One of Vital Factors In Driving During Severe Weather—Use of Radiator Cover Is Favored.

Protecting the finish of a highly polished car and conserving the best energy generated by the motor are two vitally important factors in motor-ing.

Another highly important feature of winter driving is the care of the storage battery in the car.

The finish of a car may be exposed to the weather and conditions which tie the fact that mud and water frozen on the paint dull the finish and cause the paint to chip. During the winter months extra precautions should be taken to keep the finish free from dirt. "Contrary to popular belief, hot water should not be used in cleaning a car, as it is equally injurious to the mud and ice. If it is not possible to take the car into a warm place for washing, where the ice will thaw and can be removed easily, cold water may be used without injury to the finish."

Heat Vital Factor.

Heat is one of the important factors in winter driving. During the summer months the motor has little trouble with getting its motor warm enough to operate smoothly and economically, but during the winter it is important that the motor be given heat enough to insure this efficient operation.

As a result gasoline passes by the piston rings and dilutes the oil, and the gasoline does not give its heat-producing power and the oil is not heated to such a point where it will lubricate the cylinder walls and the pistons and rod to do.

This passing of gasoline in the crank case may be considerably reduced by the use of a radiator cover. Such a cover will hold warm water during the periods when it may be not attending out of doors or in unheated garages. Numerous devices are being marketed for this purpose ranging from a waterproof covering to an automobile cover attached to a hand-operated shutter which serves the purpose of conserving the heat of the engine to a very great extent and is very economical to install can be purchased from any reliable accessory dealer. There are also on the market several devices which are quickly and easily installed and are economical in operation.

Battery Important Factor.

The storage battery of a car is an all-important feature of the operation and use too frequently neglected. Care should be taken at the start of the cold weather to see that it is properly charged. Any service station will be able to give this information.

During the winter months, due to the short days, the light of a car are used a great deal more than in summer. The storage battery is used mostly in getting the car running when it is cold, and the battery is drawing a great deal of power from the battery.

For long distance motoring the charges more quickly than in summer, and it should be remembered that a fully charged battery never freezes, while a battery that is not fully charged freezing of a battery will ruin it and make it useless for motoring.

VIBRATION CAUSE OF NOISE

Where Bolts Become Loose at Base Wrench Should Be Applied to Make Everything Tight.

If a motor is subject to considerable vibration there is danger of the bolts coming loose at the base. These bolts should be applied occasionally to make sure they are properly tight. If they are not attended to, almost anything may happen from oil leakage to wrecked engine.

That's All the Difference.

Some girls don't write home from college for several weeks and some run out of spending money in a few days.—San Francisco Chronicle.

Where the Line is Drawn.

Men are constituted to be laughed at for their wit, but not for their folly.—Jonathan Swift.

The Future in the Present.

The future does not come from behind to overtake us, but comes streaming up from behind over our heads.

AUTO GAS POISONING DURING COLD SEASON

Motorists Are Warned of Danger From Carbon Monoxide.

There Is an Ever-Present Insecurity to Owners of Cars More Particularly When Closeted With Their Machines.

A writer to the New York Times calls deserved attention to the marked difference in the danger from fumes of illuminating gas as contrasted with the automobile carbon monoxide gas.

"There is a vast difference," he says, "between illuminating gas and the escaping exhaust fumes from an automobile while the engine is running. Properly harnessed, escape from death is any while using illuminating gas, as in the latter, an escape seems possible, even in the open air. There is an ever-present danger to operators of automobiles, more particularly when closeted with their machines.

"The committee of the New York board of health has been called to the fact that carbon monoxide is a cumulative gas, particularly to those who sit on low benches in motor vehicle drives. Examination by blood tests of pleasure-seekers who have been extensively in front unforeseen circumstances has proved that exhaust gas from the parked automobiles are responsible for their condition. This is dangerous, but, fortunately, it is not so fatal.

"Carbon monoxide is generally increased when the winter months automobile engines are started in cold garages, and it is often the result of carelessness on the part of those who have been left in the structed in the perils of such a procedure.

The general public may be ignorant of the fact that, according to the latest medical authorities, the combustion of gasoline in the automobile mixtures of carbon monoxide and carbon dioxide, which is the kidneys, heart, brain and other vital organs. Operations are fully aware of this danger, yet it has been stated that the carbon organs of the body can be seriously affected by poisoning from breathing the air containing as small a quantity as 1-1,000 part of carbon monoxide.

"How many automobile owners know that carbon monoxide is a colorless, odorless, tasteless gas? It is extremely poisonous, because it combines with the red coloring matter of the blood more readily than does oxygen. Exposure to as little as 5 per cent causes headaches. The dangerous symptoms cease without warning."

Proper Steering Grip.

The proper way to grip the steering wheel is to straddle a spoke with the fingers of the left hand, and the right. This is safe method, especially when driving fast or on a slippery road.

AUTOMOBILE GOSSIP

There are more than 50 parts of a car that need lubrication.

* * *

Good tires require no much attention as any other part of an automobile.

* * *

Keep springs tight at the axles; looseness here causes most spring breakage.

* * *

To obtain one barrel of gasoline, the oil industry has to produce nearly four barrels of crude petroleum and by-products.

* * *

Before driving away in a car that has been standing on a steep grade, throw the loose stones or other objects in the road behind the wheels to keep the car from rolling along later.

* * *

"It has been the mistake of the intellectual revolutionist or radical that he has clustered himself up with too many minor and unessential results and radicalisms; revolts in art, language, music, thought, religion, morals, habits, manners. He has approached the working classes with Nietzsche in one hand and Freud in the other; whereas the books that in my opinion will be the means for the purpose of proletarian agitation are still the Bible and Darwin's Origin.—Simon Strunsky, in Post-Impressionism.

POULTRY

DISCARD ALL DOUBTFUL EGGS

Farmer Should Give More Attention to Candling Before Shipping Product to Market.

(Issued by the United States Department of Agriculture.)

Farmers, merchants, and shippers in the country districts will improve the reputation of the market egg if they give more and more attention to careful candling of eggs before they let them go any further on the way toward the consumer. The presence of doubtful eggs here is the reason for all the eggs marketed and has a corresponding effect on the price. The way responsible for the sale of doubtful egg is a bad egg even if it is

Candling is Surest Way of Taking Doubtful Eggs Out of Egg Case.

a good egg" said something on poultryman or egg dealer ever should forbid.

Candling is the surest way to take out of the egg case. The United States Department of Agriculture has a bulletin on the best methods and equipment for doing the work. Those who want it should write to the department at Washington, D. C., for Department Bulletin 350, How to Candle Eggs. It contains descriptions of candles, of the handling of small numbers of eggs and for handling large quantities.

CLEAN EGGS ARE PREFERRED

Bring Five to Eight Cents More Per Dozen Than Dirty Stock—Change Neat Matters.

Clean nests will go a long way toward securing fresh eggs, which will bring all the way from five to eight cents per dozen more than dirty eggs in the city market. Change the nesting material frequently, keep the dropping boards clean and remove the litter as soon as it becomes dirty.

The hens, litter and dropping boards must be clean or the layers will lose every fact. Hens with dirty feet will soil a whole nest full of eggs.

LIME NECESSARY FOR FOWLS

Essential in Manufacture of Eggshells and Heavy Layers Need Big Quantities of It.

Hens without lime can come as near laying heavily as a hen home country wh with a hobble about its legs. Lime is necessary in the manufacture of the shells, and heavy layers need enormous quantities of it. Oyster shell is the most economical form in which to supply it, and one of the best poultry investments you'll make.

POULTRY NOTES

By a trip is month a male and two females.

* * *

Keep pure fresh water always within reach.

* * *

What is known as a yearling hen is one having laid twelve months.

* * *

In selecting a location for a poultry yard, choose a light, sandy soil.

* * *

A male bird less than a year old is called a cockerel. When over a year old it is a cock.

* * *

It costs no more to keep a hen that lays 200 eggs than one that lays only 75. Why keep the latter?

* * *

Dry quarters free from drafts and with ample room for the birds housed there are the best preventives of roosting.

* * *

Cramming is a system of forcing food into young fowls, either by hand or machine, so as to put on extra flesh.

* * *

Lameness in poultry is a symptom of a number of poultry troubles and diseases, the most common one being tuberculosis.

* * *

A hen must lay 80 eggs a year to earn her feed cost, and at least 90 eggs to pay her board, keep and care, it is figured.

* * *

The drakes can be distinguished from ducks when seven or eight weeks old by the curl in their tails. They have larger heads and a straighter carriage.

Fordson

THE UNIVERSAL TRACTOR

Buy Your Fordson NOW

At this amazingly low price you can't afford to wait another day for your Fordson Tractor.

There is no tractor made that can approach the money saving value the Fordson. Nor is there a Tractor made that can do more work for you.

Remember, the very day your Fordson arrives, it is ready for any one of the 101 jobs it can do—either as a tractor or a stationary power plant.

The Fordson has proved to the 170,000 owners that it has not only cut the cost of field work 30% to 50% but that it has made substantial savings on every job to which it is put.

Fordson figures are interesting-money-savers, labor-saving, drudgery-saving facts you ought to know. Come in, phone or write today.

When Life Pesses Quickly.

The years between the ages of twenty-five and forty seem to pass more quickly than any other period of life.

BETTER METHODS FOR LAUNDERING

Need for Demonstration Work Shown by Surveys Made in Two Missouri Counties.

MACHINES SAVE MUCH TIME

Comparisons Were Also Made in Ironing, Both With and Without Electricity and Ironing With Manyo-Latter Best.

(Prepared by the United States Department of Agriculture.)

Results of surveys in Lafayette and Saline counties, Mo., have recently been tabulated by extension workers of the United States Department of Agriculture, to show the need for demonstration work in improved methods of washing and ironing. In Saline county 1 per cent of the people used the washing out of the house, 25 per cent still used the washboard, 40 per cent used hand machines, and 33 per cent used power washers. The average time for doing washing with a power machine was two hours, as against two hours and one-half hours with a washboard. In the families where washers have been purchased since the survey was made, it is estimated that one and

Tub and Washboard Method is Gradually Being Discarded.

three-quarter hours a week, or 133 hours a year, are saved in each household.

Washing Done at Home.

In Lafayette county, 96 per cent of the washing was done at home. The tub and washboard method was used by 29 per cent, hand-power machines by 24 per cent, 21 per cent used power washing machines and 26 per cent had machines operated by an electric motor. Clothes were handled five times on an average. The time for doing washing by motor power was approximately fifty-five hours and two to do it by tub and washboard method.

Mangle is Best.

Similar comparisons between hand ironing, both with and without an electric iron, and ironing with a mangle, were made. To iron 25 pounds of clothes, with an electric iron took six and one-half hours and cost 19 cents for electricity. To iron 25 pounds with a mangle took one hour and used current worth 29 cents.

JELLY ON PANTRY SHELVES

Housewives Last Year Either Sold or Put Away 1,335,000 Containers—Also Fruit.

Farm housewives last year either sold or put on their pantry shelves 1,335,000 containers of jelly, 9,200,000 cans of fruit and vegetables, and 715,000 pounds of poultry and meat, canned according to methods demonstrated to them by extension agents of the United States Department of Agriculture and the state agricultural colleges.

DELICIOUS PUDDINGS FROM HOMINY GRITS

Comparatively Inexpensive and Excellent for Breakfast.

(Prepared by the United States Department of Agriculture.)

Hominy grits are comparatively inexpensive, and are excellent as a cooked breakfast cereal or as a foundation for other dishes. Here are two recipes for using hominy grits, recommended by food specialists in the United States Department of Agriculture:

Hominy Date Pudding.

2 cupfuls hominy grits.
2 cupfuls milk.
½ teaspoonful salt.
1 cupful dates.
2 cupful chopped seeded dates.
½ teaspoonful vanilla.

Add the salt and hominy grits to the milk, and cook in a double boiler one hour. Add sweetening, dates, and vanilla and mix well. Pretty cool before serving.

Fruit Scallop.

½ cupfuls cooked hominy grits.
1 cupful stewed and sweetened apricots.
½ cupful apricot juice.
½ teaspoonful lemon.

Into a greased baking dish place, first, a layer of hominy grits which have been mixed with the fruit juice, then a layer of the stewed fruit. Repeat until dish is nearly full. Dot with butter, and sprinkle over top with one tablespoonful of sugar mixed with cinnamon. Bake until brown. Serve hot or cold with sauce or top milk.

Dried or canned fruit can be used.

KITCHEN TABLES AND SINKS

It Frequently Happens That Working Surface Is Much Too Low for the Housekeeper.

Kitchen tables and the bottom of sinks are frequently too low for the housekeeper to stand and work at comfortably. Low working surfaces are often responsible for tired backs and crooked shoulders because of the bent stooping and the strain on the arms and shoulders. The fitting of tables suggest the proper height for working surfaces for women of different height:

Height of Woman.	Inches.
4 feet 10 inches	32
5 feet 1 inches	33
5 feet 3 inches	34
5 feet 5 inches	35
5 feet 7 inches	36

The kitchen table can be raised to the proper height by the use of blocks of wood, the United States Department of Agriculture suggests. One type of block has a socket in which the table leg fits securely. Another type has metal strips and screws or nails for fastening it to the legs of the table or cabinet.

OF INTEREST TO THE HOUSEWIFE

Put corned beef on to boil in cold water.

* * *

Lemon juice will remove dust from silverware.

* * *

Use your custard cups for the jellied salad.

* * *

Meat should be cold if they are to heat well.

* * *

Worn tablecloths may be cut into squares and hemstitched to make extra napkins.

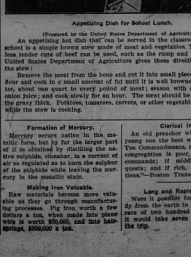
* * *

Left-over beans may be combined with tomatoes and made into a delicious, nourishing dish.

* * *

When making dropped cookies, if you dip a teaspoon in cold milk before putting in the mixture the batter will slide from the spoon very easily.

HOT BROWN STEW FOR SCHOOL LUNCH



Appetizing Dish for School Lunch.

(Prepared by the United States Department of Agriculture.)

An appetizing hot dish that can be served in the classroom for lunch at school is a simple stewed meat and vegetable. Two cheaper cuts of meat, less tender cuts of beef can be used, such as the rump and the round. The United States Department of Agriculture gives these directions for making the stew:

Remove the meat from the bone and cut it into small pieces. Dredge with flour and cook in a small amount of fat until it is well browned. Add hot water, about one quarter cupful for each pound of meat, and season with salt, pepper and onion juice; and cook slowly for an hour. The meat should be very tender and the gravy thick. Potatoes, tomatoes, carrots, or other vegetables may be added while the stew is cooking.

Formation of Mercury.

Mercury occurs native in the metallic form, but by far the larger part of it is obtained by distilling the native sulphide, cinnabar, in a current of air so regulated as to burn the sulphur of the sulphide while leaving the mercury in the gaseous state.

Making Iron Valuable.

Raw materials become more valuable as they go through manufacturing processes. Pig iron worth a few dollars a ton, when made into hairsprings is worth $50,000, and into watch springs, $500,000 a ton.

Clerical Irony.

An old gentleman who asked for a young one the best way to teach the Ten Commandments, replied: "If your congregation is poor, teach them as commands; if middle-class, as requests; and if rich, as recommendations."—Boston Transcript.

Long and Rapid Journey.

When it possible for an airplane to fly from the earth to the moon at the rate of two hundred miles an hour, it would take seven weeks to make the trip.

POPULARITY

PEKIN DUCKS GROW RAPIDLY

Young Fowls Intended for Market Should Never Be Given Anything but Soft Food.

The Pekin is the only duck that grows rapidly enough to make a good green duck. Ducklings that are to be marketed at six weeks old should never have anything but soft food. Start them on bran and middlings of dry bran, and as soon as they have learned to eat well give a "sweat" of two parts bran, one part middlings and a very little corn meal, moistened with water, but still crumbly, and with about 5 per cent meat scrap, or sour milk. This may be fed at first five times a day, but should soon be gradually diminished to three times a day. Never forget the sand, for the duckling must have it to digest their food. The amount of corn meal in the mash may be gradually increased and a little beef scraps added after two weeks, though young duck raisers never feed it, and it is a good plan to feed, cut up alfalfa, or other greens in the mash until the ducklings have learned to eat without cutting. By the eighth week the mash may consist of equal parts bran, cornmeal and middlings, with 5 per cent beef scrap, and always sand. The last two weeks some of the big duck farms add a little oil meal for finishing. The point is to make the mash richer

Start Ducklings on Bread Crumbs or Dry Bran.

and more fattening as fast as the birds are able to digest it, and to get them to market at the earliest possible moment. After the market is flooded with broilers prices drop rapidly. The greatest demand is of course in cities.

DIFFERENT BREEDS OF DUCKS

Pekin is Probably Most Profitable for Meat While Runner is Superior as Egg Layer.

Like hens, ducks are divided into breeds producing and egg producing breeds. The Pekin is the most popular and probably the most profitable of the large breeds, though the Aylesbury and Cayuga are also profitable meat producers. The Runner is the layer of the duck family, and is also an excellent table bird, though smaller than the other standard breeds. Like turkeys, there is a strain of wild blood in some of the best breeds.

FISH MEAL FOR LAYING HENS

About Twenty Per Cent of Mash Will Give Good Results—Protein is Big Need.

Fish meal is being fed to some laying hens with good results. About 20 per cent of the mash is the usual recommendation. The commercial dried buttermilk is another source of protein that is meeting with favor among poultrymen. A good grade of beef scrap is still the reliable standby of many breeders. But whatever you feed, do not neglect the protein if you need winter egg money.

CHARCOAL GOOD PREVENTIVE

Value Can Hardly Be Over-Emphasized and Should Be Fed to Fowls of All Ages.

The value of charcoal can scarcely be over-emphasized and it should be fed to fowls of all ages as a preventive of bowel disorders and disease. It is best to keep it before the fowls at all times; as there is no danger of them eating too much. Charcoal has a great purifying effect in absorbing noxious gases and will correct many digestive discords.

BEST PLAN TO AVOID FILTH

Clean Poultry Houses and Premises Will Prevent Serious Ailments Among Poultry.

If farmers and ordinary poultry raisers would give half the time and attention to cleaning their poultry houses and premises that they do to doctoring the sick chickens with quack nostrums, they would save two to one that they would have very few sick ones to doctor.

Life.

Man is miserable until he gets something that isn't good for him, and it makes him so happy that he gets down-right miserable when he didn't have it.

And Strikes Are Useless.

No labor union has ever been so foolish as to attempt to repeal the law of sun—Boston Transcript.

ORCHARD GLEANINGS

SETTING OUT YOUNG ORCHARD

First Consideration is Thorough Preparation of Soil—Further Data, Harrow and Drag.

In setting a young orchard the first consideration is the preparation of the soil. The ground should be plowed deep, harrowed and dragged thoroughly to feel the soil should insure the same thorough and careful preparation as for truck.

There are two methods generally used in laying out orchards—the method of planting in squares, which is the one so generally used in the past, and the triangular method, more recently adopted. By the first mentioned the trees are planted at the four corners of a square, which square then faces opposite each other in rows. By the triangular method, the trees are planted on the three corners of an equilateral triangle, and are so placed that the trees of alternate rows come opposite the open spaces of the adjoining rows. Of the two methods, the latter seems preferable, as it has the advantage of a greater number of trees per acre, and yet the cultivation can be permitted in three directions, instead of two, as is the former method. In setting the trees, large holes should be dug, or dynamited, to insure that the roots will not be cramped or bent. Any bruised or broken roots should be removed. The tree should be set to the same depth as when in the nursery row, and soil should be packed firmly about the roots by treading it down with the foot, except the last several inches, which should be fine, loose soil. The ground should be pressed before setting. The roots are usually cut back in digging from the nursery row, and the tops should be pruned to balance the roots. This pruning is not only when the soil is in good working condition, but should be done in place when the ground is dry, by pouring two or three gallons of water in the hole where the tree is set when it is about two-thirds filled, allowing it to disappear before you finish filling the hole. To promote a good growth, and encourage root development, the young orchard should be thoroughly cultivated the first several years after planting. In the dry land, where such crops as potatoes or beans are sometimes planted between the rows, but if the soil is lacking in fertility this plan is not to be recommended. In the latter event, cowpeas can be drilled in rows and cultivated between the orchard rows, and this crop will help restore fertility to the soil. A crop of cowpeas plowed under occasionally will help build fertility and keep the soil well stocked with humus.

When the orchard comes into bearing, barnyard manure should be scattered about the trees occasionally, using care to keep it away from the trunk out where the feeding roots can more easily get at the fertility.

EFFICIENT SPRAY FOR CHILI

First Consideration is to Apply at Right Time and Use Proper Material.

Good fruit can no longer be raised without sufficient spraying, which consists of spraying (1) after the fruit set, (2) using the proper spray materials (3) applying the spray thoroughly. To apply the spray thoroughly requires a pump. It is true, a barrel pump, as work can be done much better with a power pump.

KILLING PEACH TREE BORERS

Paradichlorobenzine Method Gradually Replacing Old Laborious Worm-Killing Methods.

The paradichlorobenzine method of getting rid of peach tree borers is gradually supplanting the old laborious method of worming the trees, digging out grubs and applying wash to the wire. Peach growers in various sections of the country are interested in getting the gas treatment worked out by the government.

Causes of Mental Decay.

The failure of the mind in old age is often less the result of natural decay, than of disease. Ambition has ceased to operate; contentment brings sadness, and indolence decay of mental power, mental, and sometimes death. Men have been known to die, literally speaking, of disease induced by intellectual vacancy.—Sir R. Brodie.

Not How Few to Let Go but Knowledge Spurns his Work—Emerson.

The KITCHEN CABINET

(Ch. 1931, Western Newspaper Union.)

Let's resolve:
"To see beyond the present pain
To where the sun will shine again;
To see the good in life and love
To work, to help, to act, each day."

SEASONABLE DISHES

A winter salad which is not out of reach of anyone is prepared as follows:

Put through the meat grinder two fresh crisp carrots that have been kept crisp by proper care in the vegetable bin, add a tablespoonful of two of cabbage, a small onion, all put through the finest except the onion, which should be minced with a knife; a stalk of celery may be added this combination, or lacking this, add a little celery salt. Mix with a highly seasoned mayonnaise and serve on lettuce, giving the family both carrots and vitamins needed to keep them in health.

Pork Tongue with Sour Sauce.—Wash a fresh pork tongue and rub in boiling salted water until tender. Remove to a hot platter and into the stock put a can of sour cream for better if obtainable. Let cook until done, then thicken with flour mixed with sweet cream; let all boil up together. Pour the gravy and peas around the tongue and serve hot. The tongue may be cooked and left over night in a sweet, spicy vinegar.

Why not have a sweet-sour dinner some night at home. Roast the potatoes, fry the cold meat with onions or in the sphagn of the'-haughmer, make the stuff in a cast iron pan sprinkled with salt, turn and cook quickly, spread with seasoned off batter and put into the large flat pans out open and serve with butter, sandwich fashion. Serve dill pickles, olives, corn for the table and coffee for the grown-ups. Try this once and you will be asked to repeat your menu. Any dessert such as pie, cake or cookies to serve with the hot drink will be sufficient.

Do-Over onions, roasted on coals at the side of the fire, where they will not burn, are delicious. Peel off the outside, cut open and season with butter, salt and pepper.

Pickled Pigs's Feet.—Clean and roll or who fat it too expensive, the ears all will prove very satisfactory. Make mayonnaise in the same manner as if using the olive oil. French dressing, too, is equally good.

Nellie Maxwell

O, beware, my lord, of jealousy!
It is the green-eyed monster, which doth mock
The meat it feeds on.
—Shakespeare.

WINTER DISHES

This is the time of the year when we enjoy the hearty food—puddings, rich spices and pot roasts.

Plum Pudding.

Take one-half pound of raisins, one-half pound of currants, one-quarter pound of candied orange peel, one-eighth of a pound of citron, one-fourth of a pound each of chopped suet, dates, candied cherries and brown sugar. Beat four eggs, add one cup of molasses, one cup of milk, a four-ounce jar of preserving one-half teaspoonful of cinnamon one-eighth of a teaspoonful of allspice. Cut the citron and peel in very thin pieces, and let the dry ingredients add to the eggs and molasses. Pour into a greased mold and boil six hours. When wanted to serve, steam it three hours.

Potato Puff.—Boil twelve good potatoes, mash and season with one two teaspoonfuls of salt, one-fourth teaspoonful of pepper and a little dash of cayenne, four tablespoonfuls of minced parsley and four egg yolks. Beat stiff the whites and fold into the mashed whites. Bake in a moderate oven for twenty minutes.

Scalloped Onions.—Boil sufficient onions for your family. Make up a white sauce, using three tablespoonfuls of the stock of butter and flour, one-tablespoonful of salt, cayenne pepper and a little sugar, cook for a few minutes, then fold in the beaten white; flavor with any desired flavoring.

Sure Was.

A Washington man who has been in the service walked in his shop and fell out of a second-story window. That's the method we didn't hear with his wife.

Superiority Brings Earnings.

You have to earn what you get. And to earn more than the ordinary man you must study and plan and achieve and work and think and plan and work than he does.—J. C. Penney.

Department of the Interior, U. S. Land Office at Los Angeles, California, January 17, 1923.

Notice is hereby given that Edward H. Shirley, whose post-office address is 1202 South Alvarado Street, Los Angeles, California, did on the 23rd day of July, 1922, file in this office Sworn Statement and Application, No. 02519, to purchase the SW¼SE¼, Section 18, Township 2 South, Range 19 West, S. B. Meridian, and the stone therein, under the provisions of the act of June 3, 1878, and acts amendatory, known as the "Timber and Stone Law," at such value as might be fixed by appraisement, and that, pursuant to such application, a notice of such application has been appraised at $300.00, the said stone appraised at $60.00 and the said $60.00; that said applicant will offer final proof in support of his application and sworn statement on the 12th day of April, 1923, before Register and Receiver, U. S. Land Office, Los Angeles, California, at 10:00 o'clock A. M.

Any person is at liberty to protest this purchase before entry, or initiate a contest at any time before patent issues, by filing a corroborated affidavit in this office, alleging facts which would defeat the entry.

DUDLEY S. VALENTINE,
1-25-23 to 3-29-23 Register.

GARDEN AND ORCHARD PESTS

Insects Classified Into Two Divisions for Consideration as to Their Way of Eating.

Do not forget that insect pests of this orchard and garden are classified into two divisions merely for convenience as to their way of eating—chewing insects and sucking insects. Chewing insects have strong jaws or mouth parts; bite off their food from leaves or fruits and chew it similar to the way the higher animals eat. It will be seen from this description that poison is the way to get rid of these pests. Examples of chewing pests are cut worms, cabbage worms, caterpillars, tent, moth and many other larvae.

Arsenic in some form is one of the best poisons for these chewing insects. There are other poisons. Arsenic of lead is one of the best forms parts green is sometimes used.

Sucking insects do not eat their food like the chewing insects. The mouthparts of these insects are developed into a beak or proboscis which the insect inserts into the stem, leaf

Remembering these principles made simple and practical the gardener or orchardist should examine the plant or the tree to see how the pest has taken its food or look at the insect, then apply the remedy.

Here are a few suggestions for gardeners as to the amount of arsenate of lead to use:

For chewing insects on seed fruits and truck crops, 4 to 6 tablespoons of arsenate of lead in one gallon of water. Stone fruits, chewing insects, 4 to 6 tablespoons arsenate of lead to one gallon of water. For spraying field or plantations use 6 to 8 tablespoons arsenate of lead to one gallon of water.

Parts green does not dissolve well and is harder to use. Arsenate of lead is often dusted on with ashes or air-slaked lime. When used in water for Colorado potato beetles 1 to 3 tablespoons of parsen to one gallon of water, and 6 tablespoons of hydrated lime.

FAVOR ST. REGIS RASPBERRY

Popularity Attained Through its Long Season of Fruiting and Excellent Flavor.

The St. Regis red raspberry has attained its popularity because of its season of fruiting, which extends over a period of three months, and its excellent flavor. The fruit crop ripens ahead of Antwerp, and is being produced on the second-year canes. Later in the season the fruiting canes begin to produce fruit, and it is from these canes that the bulk of crop is secured. St. Regis bears the latter part of the first season on the new canes. The same culture should be given as for other raspberry varieties, but to produce the much-desired results one must use care in the culture. Fertilize with manure and keep the soil well stirred. Some growers are tearing out this variety, claiming it is too hard to get a good crop it bears out of season crops, as

A 5-Year-Old Peach Tree Badly Damaged by San Jose Scale.

or not large enough to pay for the cost of fruit crops and sucks the juices. It may be understood that poisons would not kill these pests for it sucking juices the insect would not get the poison. These insects must be killed by contact; that is, insecticides that kill by contact, such as gases, fumes and strong solutions that burn the bodies of the insects or stop their breathing. Examples of sucking insects are San Jose scale, aphis or plant lice, San Jose scale is killed by lime sulphur, tobacco-soap, aphis by nicotine solution.

First High Heels.

According to books on costumes of the past centuries high heels were worn by women during the reign of Charles II in Seventeenth century. They seem to have attained their greatest height and popularity in the reign of Louis XIV and Louis XV of France. During the latter period dress reformers were strongly antagonistic to the hindrance being sometimes several feet in height and the width of the dresses and the height of the heels of shoes seemed to accordingly. It is probable that the term "Louis" clung to the highest French heels for this reason.

Baggage Overrun New York.

New York city is known as a baggage parade and it is estimated that between 6,000 and 8,000 professional mendicants make that city their home. About 10 per cent are said to be women.

Glass Eyes.

The invention of glass eyes is low in obscurity. Records show that they were used by the Egyptians, Romans and by Christians many centuries ago. The priests as early as 300 B. C. were known to have made them. The earliest known mention of the modern form of artificial eyes occurs in an illustrated work on surgery written by A. Pareus, a French physician, published in Paris in 1561.

Practical Adviser.

"My boy," said the eccentric old uncle, "always strive to be at the top of the heap, especially if you are in a game of football."

Fish at Play.

Fish play games just like other creatures. It is common to see a fish in an aquarium pick up a small stone and swim about with it in its mouth. It will drop it and pick it up again. Inhabitants of the sea do the same with shells.

Just Like the Man.

London doctor now comes forward with the observation that women are too weak for housework. Well, the man who invented gas for it, either!—Philadelphia Inquirer.

Saith the Pessimist.

There are times when it would seem as if the devil with a line cast about him and let—Mme. Breuillon.

Be Thorough.

It is better to say, "This one thing I do," than to say, "These forty things I dabble in."—Washington Gladden.

GOOD CARE OF RASPBERRIES

Canes Should Be Cut Back in Spring to Desired Fruiting Height—Look for Disease.

The New York experiment station has sent out a circular on care of raspberries.

With the close of the fruiting season, horticulturists at the experiment station at Geneva are recommending the removal and destruction of the fruiting canes in all raspberry plantings. These old canes are no longer needed by the bush and they may harbor disease organisms or insect pests which might infect the new growth. The removal of the old canes will also give more room for new growth the next season.

In the spring the canes of red raspberries should be cut back to a desired fruiting height, usually three or four feet from the ground, depending on the vigor of the bush. Black raspberries require more severe pruning than the red varieties as the old fruiting canes should be removed and the new growth checked in the summer by plucking off the succulent tips of the new canes at about two feet from the ground. Since the new canes do not all grow at the same time it is necessary to go over the bushes several times during the summer. In the spring the side branches which have developed as a result of this summer pruning should be cut back from one third to one-half their length.

Raspberry growers are urged to be on the lookout for plants affected with mosaic or yellows and to remove and destroy all such plants, including the roots and suckers, so that in the only way in which the disease can be stamped out. The mosaic is characterized by the mottled appearance of the leaves and the dwarfing of the canes. In setting out new plants care should be exercised to see that the plants are purchased from a reputable grower and stock will be free from the disease into the patch where it will gradually spread to healthy plants.

AVOID SUNSCALD IN WINTER

If Alternate Freezing and Thawing Continues Bark on Exposed Side Of Tree Dies.

Just from the second of the same one would think sunscald a summer trouble in the orchard. It is true the hot sun in summer, especially in some regions, may cause the sunscald, but sunscald may occur in the worst form in winter, as well.

During many winter days, the sun's heat may warm up southern or southwestern sides of trunks and branches to the twenty degrees, at night the wood freezes again. If this alternate freezing and thawing continues for any considerable length of time, the bark on the exposed side of the tree will die and split off. The broken bark offers a point of entrance for fungus tree diseases of many kinds which may ultimately kill the tree.

Where conditions are especially bad it will pay to shade the southwest portions of the trunk and branches, cornstalks, straw or similar material bound about the trunks will give an excellent protection.

A Bundle of Bonnyn Raspberry Canes.

THE KITCHEN CABINET

Good name in man or woman, dear my lord,
Is the immediate jewel of their souls:
Who steals my purse, steals trash;
'tis something, nothing;
'Twas mine, 'tis his, and has been slave to thousands;
But he, that filches from me my good name,
Robs me of that, which not enriches him,
And makes me poor indeed.
—Shakespeare's "Othello, the Moor of Venice."

DISHES FOR THE CONVALESCENT

The convalescent should be given as much variety in food as possible. Her tastes change from time to time and her appetites are apt to tire of food served in the same way much quicker than persons in health. It is horrible to think that a person who is ill or is recovering from illness is out of balance mentally as well as physically, so it is necessary to be patient and humor them as much as is possible. Persons recovering from a fever are apt to be ravenously hungry and will eat more than is good for them. The liquid food may be given in larger quantities, but the solid food must be given in small quantities.

Bacon of Ham and Eggs.—Broil an ounce of sugar in salted water—the water in which the eggs has soaked over night. Cook until perfectly transparent, then add one-half cupful of boiling milk and a teaspoonful of butter. Pour the clams through a meat chopper, bring them to a boil in their own liquor, add the sugar, season to taste with salt and pepper, moisten with cracker crumbs and serve in a pretty bowl with this toasted bread.

Prune Whip.—Stew a half-dozen prunes with a little sugar and lemon juice. In the same water in which they have been cooked, add a little more sugar, a little more lemon juice, add the beaten white of an egg and serve heaped in a glass with a dot of whipped cream.

Pineapple Pudding.—Place in a double boiler a half cupful of water and when it boils add a tablespoonful of sugar and blend in the pulp of an egg yolk, a tablespoonful of cornstarch, a little salt, two teaspoonfuls and thirteen add one-half cupful of grated pineapple or pineapple juice. Beat to the boiling point, then fold in the stiffly beaten egg white and chill. Heap up in a glass or pretty pudding dish and top with whipped cream.

Let me be better meat
To a wise man than I am much
To a wise woman, worse.
Let me grow upward toward the light
Wedded to wisdom, and be her mate
Rather than wedded to human meat.

SEASONABLE GOOD THINGS

A salad which is especially good at this season and of materials found in the home and market is:

Peach and Grapefruit Salad.—Cut heart lettuce or lettuce arrange halves of canned peaches, fill the centers with the juicy shredded celery and arrange sections of grapefruit around the peaches; sprinkle with chopped pecan meats and serve with the following dressing: Heat until firm one half cupful of cream, add paprika, one-fourth teaspoonful of salt, two tablespoonfuls of lemon juice. Place a spoonful of this dressing on the peaches and garnish with a candied cherry.

Oatmeal Bread.—Take one-half cupful of boiling water, let stand until lukewarm, then add one-half cupful of a cupful of molasses, one teaspoonful of salt, two tablespoonfuls of lard, one cake fleischmann's yeast, add the meal, if possible to put into the mixture to make a soft batter, let rise until it is until light. Pour into a bread pan and let rise until more than doubled. Bake in a medium oven for two hours.

Shirred Eggs With Bacon.—Scramble, broiled with butter, place a teaspoonful of canned tomatoes on each egg into each cup, sprinkle with seasoning and let stand for a time, or bake just long enough to set the egg white. Place a slice of bacon, cut in halved potatoes into small pieces, on top of the cupful, sprinkle with salt and pepper, cook three minutes in one of a cupful of water, and boil rapidly constantly. Let stand a few second to have sufficiently hot. Add this to omelet and serve on a hot platter surrounded with toast.

Raisin Crud.—Take a dozen large raisins, seed, place in a double boiler and pour over them a pint of boiling water; cook for an hour. Drain the water and thicken it with one tablespoonful of cornstarch mixed in a tablespoonful of milk; stir constant while adding; cook ten minutes longer, add salt and sugar to taste. Let stand until cool, then add one-half cupful of good milk.

Wrinkles and "Wrinkles."

"By the time a woman has reached middle age she has picked up a good many wrinkles," says an author. Among them being some which enable her to hide the others.

Vale Velled, "Going Gone."

Hilda Vale, the founder of Vale college, is said to have left her home in England to conduct a sale by auction.

POULTRY HOUSE PAID FOR BY WELL CULLED FLOCK OF HENS

Poultry House 22 by 40, Which Will Hold 330 Fowls—It Was Built by Mrs. Kruse of Clinton County, Iowa, the Receipts From Her Flock Paying for It in One Year—Below Is Shown a House 22 by 24.

(Prepared by the United States Department of Agriculture.)

The results obtained by Mrs. F. L. Kruse of Clinton county, Iowa, through poultry culling under the direction of the county extension agent should be an encouragement to anyone who may have hesitated to call the home flock to get rid of "boarder" hens.

In July, 1923, when Mrs. Kruse had 210 hens, she called in the extension agent and with her assistance took out 80 "leaders," which were sold while the price was good. A number of neighbors attended the culling demonstration. The egg production was not cut down after the culling. The culls were watched for four days, but laid no eggs.

Mrs. Kruse kept a record of eggs produced and sold during the year, but did not include those used in the home, which amounted to a good many eggs. The flock has more than paid for a new poultry house built last fall. From plans furnished by the extension agent. Eggs sold during the year brought $477.29, the old hens sold for $17.80. Fall cockerels were sold for breeding purposes, and the rest were marketed while young, bringing in considerable additional money. These neighbors who saw Mr. Kruse's poultry house liked the plans and built similar ones.

Chocolate Malted Milk. Made by stirring three tablespoonfuls of malted milk into a little water until well mixed, and then adding two tablespoonfuls of house-made chocolate syrup. After the mixture has been beaten a half-pint glass is filled with cold water.

Grape Milk Punch is made by combining one gill of condensed milk with three tablespoonfuls of grape juice. After filling a half-pint glass containing this combination three fourths full of water, it is finished with a little carbonated water, which is not entirely necessary but a great improvement.

Raspberry Cream illustrates how condensed milk can be used. To three tablespoonfuls of milk powder, blended with one-fourth cupful of hot water, three tablespoonfuls of raspberry syrup are added, and one-half cupful of cold water. The glass—a half-pint—is filled with condensed milk and served with chopped nuts on top. All of these drinks are best when served cold. The colder the drink the better it tastes. The drinks may also be served hot in cold weather. Adding a little whipped cream or a spoonful of ice cream is a pleasing variation for any of the drinks. Cordial syrup may be used in the same manner as the raspberry syrup, in the case of boiled, powdered or condensed milk.

WAYS FOR UTILIZING SUPERFLUOUS CRUST

Left-Over Dough Can Be Made Into Cake or Cookies.

(Prepared by the United States Department of Agriculture.)

In the making of pies a small portion of dough, insufficient for another pie, is frequently left over. This may be utilized in various ways. The following are recommended by household specialists of the United States Department of Agriculture:

Pastry Crisps.

The dough may be simply rolled thin, cut into squares, sprinkled with sugar and cinnamon, and baked until crisp. These do well to serve with sauce or other dessert, and are more economical of time and money than are most cookies or cake.

Baby-Pudy.

Roll pastry about one-fourth inch in thickness, cover with chopped currants or with blackberries, raspberries or blueberries well sweetened, sprinkle with flour, and then roll like a jelly roll. Bake in a moderately hot oven until well done. Serve with liquid sauce.

Cheese Straws.

Roll pastry thin, cover with grated cheese or with a highly seasoned soft cheese; fold into thirds and roll again into a thin, long sheet; cut into narrow strips and bake in a hot oven until delicately browned. These are good to serve with salads.

TO THY NEW STUNT

We believe this state would do well to watch the community of Ventura, which is a county town in California, and which has a population of only between 250,000 to forty boys who want to raise pigs or calves for the sake of their own, just as many boys around Owensmouth are interested in doing. The bankers will lend them money at a low rate of interest. Good times to the farmer are the thing they believe is will go a long way toward improving the lot of the farmer. Once they find they can get real financial backing and that they can make as much money as the city jobs pay, they will stay on the farm. Good times, they believe, will be a stimulus to the city. Their people are full of enthusiasm among other boys, in the school and in the city and the children are will prove a good investment. It is certainly going to be worth waiting for.

GETTING PUBLICITY

Almost everyone at some time or another has to write for the local newspaper as a means of securing some news or publicity. The latter term is the fashion with a good many as it sounds better than "boosting" and their name in print looks better. There are times when one cannot help permitting a friend to write some public charity work, or there is a wedding or death in the family, or something like it. So since it is going to it is well to remember that the publication of such expectations can be made over quite plausible satisfaction. The right way is to tell the editor you want to be credited with the paper all the particulars, or, better still, write it out and mail it or send or take it to the newspaper office. Then it will be printed in the character in the paper and perhaps not just such mistakes as some people make if the newspaper man has too often. Co-operate with your home paper; give our news it wants and without forcing the news man to get them you will be surprised how it will be soon as you become more valuable to the home boys paper than you may now consider it.

Stories of Great Scouts

By Elmo Scott Watson

G. Western Newspaper Union.

DANIEL BOONE, THE GREAT PIONEER

Daniel Boone was the son of Quaker parents, of English descent, although the principal doctrine in the Quaker creed is that one should not kill. Daniel departed from the fight of his ancestors and became one of the greatest Indian fighters in American history.

When Boone was eighteen his parents moved to North Carolina and in the Yadkin valley of that state, young Boone became an expert woodsman and hunter. Attracted by the tales of a trainer who had crossed the Appalachians into the unknown Kentucky country, Boone settled in the Carolina state several times until he finally decided to make that country his home. In 1775 he established Boonesborough, the first outpost of civilization in the "Dark and Bloody Ground," as Kentucky was called because it was a battleground for many tribes of Indians.

Boone's adventures with the Indians in his new home were innumerable. In 1778 he captured the Shawnee chief, Boone, who endured the scot's courage so much that he was not only adopted but blessed Chief Black Fish adopted him, giving the name and sign of Big Turtle rather an inappropriate title for a man so active. Boone was adopted and pleased with his captivity and after several months he accompanied with the savages relaxed. Then he made his escape.

Several years later this same band of Shawnees came to Boonesborough to kidnap their former captive. They found Boone in a salt lick and prepared for dying tobacco.

"Now Boone, we got you," said the Indians. "You go along with us!"

"Yes, you have got me but I am glad to go with you," replied the crafty old hunter. "I have long wished to see some of this tobacco."

He gathered up a number of the dryest leaves and he lighted the fire. Boone, crafty, he had made. Before they could move, he threw the powdered tobacco into their eyes. As the blinded savages were rubbing and blowing and digging at their eyes, the former "Big Turtle" drew some pointed spear and was far up the trail to the fort before the Indians could pursue him.

In his later years Boone was cheated out of the rich Kentucky lands he had fought so hard for, and he was forgotten in Missouri, becoming a hunter once more. He died there in 1820 at the age of eighty-six. A quarter of a century later Kentucky awoke to the latent honor by removing his body to the capital of the state and today Daniel Boone sleeps in the land where he was born as a pioneer and scout.

:: PEN POINTS :: OWENSMOUTH

Many papers have printed the picture of Abe Lincoln recently, but the best picture of him we ever saw is the one on a $5 bill.

Any man who can get his wife's undivided attention by talking in his sleep.

Many people who say they goods has March, Chief of the Weather.

Figures compiled from Sacramento show that approximately 500,000 people, 50 per cent of them people made thus for this year. Total registration at Sacramento for the year is 1,000,000 people. This would mean that approximately 500,000 people were made thus for this year with the next five days or suffer the consequences.

To accomodate the motoring public on the Sacramento-Stockton road, all the branches located at San Joaquinez will be closed from 12 to 1 o'clock. This will be the first two days of the week, including March 2nd, and will 2:30 o'clock only.

Police officials of the state are being notified that enforcement of the "Sacramento-Stockton" law of the land should be commenced within a few days after March 2nd.

The enforcement law will take the form of clerks at the Sacramento and branch offices and the branch offices will be able to handle all applications as rapidly as they have come in the office. There will be no delays and if the motorist does not have his license on hand, the end of the registration period, the fault will be his.

Have you ever thought of being helpful? Have you ever thought on the city streets or boulevards?

Some people are so helpful every time a motorist does to stand up and wave a flag or a handkerchief. Now, in the Southern California, there is generally very little of the kind of thing by motorists.

But, particularly in approaching a street intersection the law requires the conscientious motorist, particularly, to make a sign. Sometime some period say to themselves "Oh well" there is no one behind us and we can slide on another to give a signal?" They don't have to consider the law. Only the report, that an arm signal given in time, prevents a wreck. Now, it is not seem in the direction of the intersection for then he can tell how to slow down and how to give the signal from behind.

Highways and on the roads is very closely akin to courtesy and motorists who appreciate the courtesy will not grab the right of way at street intersections. Courtesy is a big thing in this among, when people are not only helpful to the other fellow they will slow down considerably and what he is going to do. In this way accidents are prevented. Courtesy will act as the loss of a lot of temper and the loss of a lot of money and time.

We can also be helpful on a traffic jam when there is no policeman present. Highways will not be in a hurry through the mob of machines and will look comfortable and see how you can best help to unravel the tangle.

Traffic jam, for instance, at the entry the Auto Club safety bureau, by which there is in the Auto Club motor is would consider the welfare of his fellow motorists, and would be
