LARGE INFLUENCE OF MALES

Selection of Roosters to Increase Egg Production to Greatly Exceed Females.  
Although poultry experts have long recognized the importance of the male, the influence of these birds on the production of eggs has not been generally appreciated, according to an article in the "Poultry" department of the "Farmers' Bulletin." This article contains several pertinent statistics regarding the influence of the male on the production of eggs.  
It has been demonstrated that it is possible to determine the approximate number of eggs which are likely to be produced by a pair of birds by observing the rooster's behavior. The article states that the rooster's influence is particularly noticeable in the case of certain breeds, such as the Game and the Old English Game. In these breeds, the rooster's influence is so great that it can be said that the rooster is the dominant sex.  
The article also discusses the importance of the rooster's selection in the case of the Game and the Old English Game breeds. It states that the rooster's selection is particularly important in these breeds because of their tendency to produce large numbers of eggs. In fact, the article states that the rooster's influence is so great that it can be said that the rooster is the dominant sex.
