

500 FEET OF POWER IN LIGHT WIRES THREE MILES WEST

The Bureau of Light and Power is investigating the proposition of extending the city light and power wires three miles west of town to the district which is located between Johnson & Woodruff, Clark Shomeraker, Clarkson & Zwart, Jevon, Heffer, Carter and Shafter ranches. Johnson & Woodruff now have a 25-horse power plant of their own. Dr. Shomeraker is installing a 20-horsepower plant by using a Buick engine, and Clarkson & Zwart will put in two Buick engines if the power wires are not extended. If the wires are extended Johnson & Woodruff plan moving their lights to the property—the old Bull ranch—and will sink a 200-foot well there to develop water of their own for that portion of the ranch, installing a 20-horse electric pump for the same ranch.

Owensmouth's ball tossers put the Ashes under San Fernando last Sunday. The Browns and Bert Mann were all-important factors in Owensmouth's victory. Clint Brown, who played ball when Methuselah was teething, staged a fine comeback on the mound and made fools of the San Fernando sluggers, striking out fourteen of them. In the pinch Brown had his day for the fourth frame, when the San Fern team took a 1-0 lead to give the visitors the game. Luckily, Owensmouth didn't panic in feeling that way as it proved to be the first score. In the sixth, Frank Brown came up with one of Cruz's home runs and sent it over the center fielder's head for a home run, the first and only one of this season on the grounds. Bert Mann wasn't in it with Casey. Casey earned nothing from the game with only three runs on bases. In the seventh inning Bert merely slammed out a double with the bases loaded, thereby setting the home runs, and evening to the score for Owensmouth. It looked as though Owensmouth in the ninth but for a lightning split Owensmouth retired to be doored after San Fernando scored once in the eighth. The home club overed up matters in the ninth and the redoubtable Clint held the visitors down in the tenth. The home club opened up for Owensmouth and took first after hitting the pitcher. Clint Brown, who has been a pitched ball since his childhood, Owensmouth's most reliable hit, singled for his fourth hit of the game, and then Jim Brown broke up the game with his fourth cut to deep right, scoring Gabe.

H. J. WHITLEY MOVES OFFICES TO RESEDA

H. J. Whitley, who planned, managed and largely financed the original development of the 47,000 acres in the San Fernando Valley, is known as the San Fernando Valley man. In moving his office from the Van Noy building in Los Angeles to Reseda, he is moving his office to the place where he originally owned the principal tract. He is having the office moved separately by his son, Ross E. Whitley. Mr. Whitley is also well known as a real estate developer and personally owned and developed Whitley Park, a tract between Heights and Whitley Heights Park, which are among the most distinctive residential tracts of Hollywood.

CO-OPERATION IN COMMUNITY CHURCH

Paper read at the dedication of the new Community Church at Owensmouth by Charles Weeks.

The human being is born with very little of the good that is largely by precept and example. The birds of the air, the fish of the sea, the plants of the earth each live in their separate existence without doubt or questioning, content to fly, swim or crawl well, never a longing for a higher or more perfect existence.

ASSOCIATED CHAMBERS OF COMMERCE TO MEET HERE

Arrangements are going forward for the moving of the Associated Chamber of Commerce of the San Fernando Valley to be held in Owensmouth next Tuesday evening. The meeting will open with a banquet at the banquet of the Community Church at 6:30 o'clock. It is expected that the banquet will be attended by about a hundred of the members of the San Fernando Valley. A program of entertainment will be given during the banquet.

FOURTEEN APRICOT RUN

The Owensmouth plant of the California Fruit Packing Company, at Owensmouth across and Hart street, was put in operation for the drying of apricots the first of the week. About a hundred persons are employed, including some eighty workers in the apricot sheds. The plant is under the management of G. W. Matson, with H. H. Moore serving as show foreman. They expect to handle about 200 tons of apricots this season. Among the ranchers for whom they are handling apricots are Mrs. Mary Sloan, L. R. Paul, Harold Dickson, J. A. Strobel, J. H. Hill, Frank Morrow, Mr. Lillian Hadley, A. Moore, W. H. Hayward and James Dickson.

The apricots being handled are of good quality for this season and the upper San Fernando valley will produce 250,000 bushels of apricots this year. The crop in the vicinity of Lankershim is shown a failure, and some of the dryers there are being operated.

CHATSWORTH CLUBS CORNERS NEWS NOTES

The Chatsworth Club has changed hands and Mrs. Leo Gleason is the new owner. The cafe has had a steady and substantial growth. Mrs. Mattis has sold his five-acre lot to his local ward who is situated at Santa Barbara, opposite the new Mrs. D. C. Mattson has left for Seattle on the Admittal line of steamers. A three County vacation among her relatives and friends. Mrs. F. M. Ed has visited the city of the Ladies Aid was a great success and may report a very substantial and gratifying record.

FALSE SIGNALS CAUSE ACCIDENTS

Raring port has been falsified by a chorus of conscientious auto owners in this part of the state against the practice of "false" hand signals, and this growing movement is being aided by the Auto Club of Southern California.

BOY SCOUTS MET TUESDAY EVENING

The Boy Scouts met in the scout room of the Community Church Tuesday evening for the first of the year. Plans for the scout camp to be held in the hills north of Hollywood July 21 to 31 were discussed. A folder giving details of the camp program may be obtained from the scout master.

COLD STORAGE PLANT

The Marfan school building was nearing completion. Misses Lulu and Mattie Draper left for their home in the city. The postoffice at Marfan (now Reseda) was about to be opened.

SEVEN YEARS AGO

Miss Agnes Ralph went to Berkeley to attend summer school at the University of California. Mr. and Mrs. E. Beckstead were harvesting the fruit crop on their ranch.

OWENSMOUTH

RENOVATING OLD ORCHARDS

Why Many Apple Trees Don't Have Continued Usefulness They Are Simply Exhausted.

In looking over an old farm one often sees an old apple orchard that seems to have outlived its usefulness. Many times these trees, although no longer young, are free from diseases, comparatively, and in a fairly good condition. They are simply suffering from exhaustion, which has been caused by neglected culture and want of food. The owner has been content to take all the tree offered him of food. The owner has been content to return. While they were young and cared for, and there was a sufficient supply of food in the soil the nutrient it must have—old orchard. It was fertilized by its own leaves dropping and decaying—its storehouse laid exhausted by its own gradually lost its vigor.

In their present condition they are of little value, but most of them can be removed to a fair degree of usefulness. Unless one has a sufficient number of young trees bearing, and if the trees in question are of a good variety, it will pay well to take restorative measures. It is a mistake to think that the dead branches come in harm. They should all be removed for the longer they remain the more injury they cause the tree. A great deal of pruning will as a rule be necessary, but it is necessary only inasmuch as it is best done in the spring. Grafting is an excellent way of giving new vigor to trees that have been lost in an uncertainty condition. A new top can be put on and it sometimes has a really wonderful effect.

After the part above the ground has been pruned—terminal until it pleases the eye, let the tree use its own strength below. For that part which is under ground needs fully as much attention as that which we see. Most of the unproductiveness of the tree is

PROTECT YOUNG FRUIT TREES

Something Must Be Done to Prevent Ravages of Mice and Rabbits During Winter.

Young fruit trees should be protected at this time of the year from the ravages of mice and rabbits, according to the horticultural extension department of Iowa State college.

Cultivation for a distance of about three feet around the tree in the only method that will insure protection from mice. The mice will not only where there are no grasses for nest building.

Many methods are followed to stop damage caused by rabbits. Wire protectors secured on the material serve the purpose very well. These protectors can be made by cutting half inch mesh screen into strips 18 inches and 12 inches wide. The strips are hooked around the tree.

Woven boards are used by some fruit men, but these boards must be removed every spring, as borers crawl through the boards and lay their eggs.

The best and surest method of protection, however, is to paint the trunk and larger branches with a concentrated solution of commercial lime sulphur. The trees should be painted new and again in February. Last year most of the damage was done the first of April. If the sugar is worn off it

Apple Tree Injured by Rabbits—Note How the Bark Has Been Eaten Away.

the spring, the tree should be painted at once. This is because applied with a cloth wrapped on the end of a stick.

FIGHT ON ORCHARD INSECTS

Campaign Can Be Carried on to Better Advantage During Winter Than at Other Times.

Scale insects and mites can be fought to better advantage during the winter than at any other time. This is because spray solutions strong enough to kill such insects cannot be used when the trees are in bloom.

During the winter, when the trees are dormant, such strong spray as lime-sulphur and all emulsions can be used without injury to the tree, and with such death to scale and mites. Experience has shown that late winter or early spring, just before the buds start, is the best time to apply such spray. Every orchard should plan on at least one thorough spraying with lime-sulphur each winter, as it is the best general clean-up that can be given to the orchard.

ROOT-TUBERCLES OR NODULE

Small Galls or Knot-like Enlargements in Nitrogen From Air and Store in Cells.

The fungus root-tubercle or nodule are very small galls or knot-like enlargements on the roots of leguminous plants. These are caused by certain gram-negative bacteria in the soil where legumes grow.

These are caused by certain gram-negative bacteria in the soil where legumes grow.

CHECKING CHERRY LEAF ROT

Pomologists Favor Plowing Under of Leaves of Infected Trees to Kill Infection.

It is the opinion of the pomologists at the New York experiment station that the plowing under of leaves that are gathered from trees which were infected with leaf spot or shothole fungus, will remove the great source of infection. This plowing should be done early in the spring, before the fungus has a chance to develop.

Firm Bed Bed Favored.

A firm and bed gives the clover and grass plants better conditions for growth and grain is less apt to lodge under any conditions.

Building Open Heds. Open heds can be built in sections and bladed against a south wall. These heds do not need back.

Why Many Farmers Lose. There are many farmers losing because they are not using the best methods for raising and improving their stock.
